SIO Photographic Laboratory

Photographs, 1949-2000

Physical Description:

approximately 80,600 images

or 69 archival shoe boxes of negatives and 18 manuscript boxes of prints

Description: The SIO Photographic Laboratory was established in 1949 to provide photographic services to the SIO community. Photographers photographed instruments, ships, events, people and campus scenes at the request of SIO offices and departments. The office that placed the order was charged for prints. Negatives remained in a central file at the SIO Photographic Laboratory. The negative file consists mainly of b/w 4X5 negatives, although the collection includes some color negatives and negatives in other sizes. The SIO Photographic Laboratory sequentially numbered each negative. A log of description was kept at the SIO Photographic Laboratory. The log includes the negative number, date and subject of the photograph, and the office or person who ordered the image.

Beginning in 1958, the SIO Photographic Laboratory took photographs of the campus of the University of California, San Diego. Many of these images were ordered by Physical Plant as a record of the construction of campus buildings, but the UCSD images also include photographs of inaugurations of chancellors and other campus events.

This accession consists of some 80,600 original negatives, and prints of many but not all of these images. The accession includes images of instruments and vessels, aerial photographs of the SIO and UCSD campuses and surrounding areas, images of marine life, photos of buildings, campus scenes and events, approximately 11,600 portraits of faculty and staff, negatives of line drawings and other illustrations for scientific manuscripts, and photographs of expeditions and work at sea.

The accession is divided into two series: SIO/UCSD Photographs arranged numerically by negative number and portraits arranged alphabetically by name of subject.

The SIO Photographic Laboratory was established in 1949 when John MacFall was hired as the first photographer. While the laboratory was established to do still photography, the laboratory also made several silent expedition films during its early years of operation. The decision was made to close the laboratory in 2000 when digital imagery began replacing film. Sue Green was the last photographer.

Index to Photographs, 1966-1976

### Introductions

When the SIO Photo Lab was established in 1949, photographers recorded identifying information about photographs on glassine envelopes and in a card index. In 1966, these methods were supplemented by a photo index which was kept by photographers and lists negative number, subject of photograph, date of photograph and sometimes the name of the person or office that placed the order for photographs, SIO Archivist Deborah Day borrowed the SIO Photo Lab index and prepared this photocopy of it in January, 1989. The original index was returned to the SIO Photo Lab.
