Revelle, Roger Randall Dougan 1909-1991

Roger Randall Dougan Revelle Papers, 1928-1979

Physical Description: 98 mss, 3.5 Lmss, 2 oversize boxes, slides

Arrangement: The original arrangement has been disturbed over the years. Revelle kept some of the personal papers at his office and others at home. It was his custom to retain only current files in his office and study. From time to time these files were weeded. Older material was removed from the current files and placed in storage. Thus folders with the same or similar headings sometimes include material with overlapping dates. Some folder headings were filed directly and others indirectly. For instance, some folders containing material documenting the Biological Effects of Atomic Radiation (BEAR) Committee were filed directly under the committee name while others were filed indirectly under National Academy of Sciences, BEAR Committee. The Revelle Papers also included loose material which was not enclosed in folders and material in mislabeled or incompletely labeled folders. The original record series were discernable, and with the exception of loose material, it was possible to reconstruct the original arrangement of folders within series.

The Revelle Papers consist of the following series: Biographical Series; Correspondence Series; Organizations Series; Harvard University Series; Subject Files Series; Published and Unpublished Writings Series

Loose material, largely correspondence, has been arranged chronologically and placed in an artificial correspondence series. The correspondence series also includes folders labeled *miscellaneous personal correspondence* and *general correspondence*.

Description: The Roger Randall Dougan Revelle papers provide substantial documentation of Revelle's career and professional life and some documentation of his personal life and family. The collection is divided into six series:

The **biographical series** includes Revelle's copies of University of California biographical and bibliographical material, newspaper clippings, articles, curriculum vitae and other material of a biographical nature. Portrait photographs of Revelle, and a small group of photographs of his daughter Anne Revelle Shumway as a child are also found in this series. The biographical series includes two folders documenting Revelle's appointment as a naval reserve officer and his service in the navy. The biographical files also include a transcript of an oral history interview conducted with Revelle by Texas A&M in 1976. This transcript includes Revelle's corrections and annotations.

The **correspondence series** consists of general correspondence and personal correspondence arranged chronologically. Much of the material in the general correspondence subseries was found loose among the Revelle papers. Loose correspondence was added to the subseries when it was not possible to discern its original folder location. The correspondence in this series is complemented by correspondence dated 1963 and 1970-1977 which is filed under the heading *Daily File* in the subject series.

The **organization series** includes files documenting Revelle's affiliation with and service for a large number of international, national, local, professional, civic and charitable associations. These files are arranged alphabetically.

The **Harvard University series** includes files generated while Revelle lived in Cambridge from 1964 to 1976. This series overlaps with others as it includes correspondence, subject files, committee and organization records, manuscripts of speeches, papers and other writings generated while Revelle served as Director of the Center for Population Studies at Harvard.

The **subject series** includes folders on subjects arranged alphabetically. This series includes Revelle's research notes. It also includes correspondence, memoranda, itineraries, notes and other material documenting Revelle's interest and work in India, Pakistan, Bangladesh and Nepal. This material is filed under the subheading *Indian Subcontinent* within the subject series.

The series of **published and unpublished writings** includes lectures, prepared remarks, speeches, transcripts of congressional testimony, interviews, manuscripts and drafts of scientific papers, book reviews, articles for encyclopedias and other writings arranged by date. Almost all of the speeches, papers and other writings in this series were written by Roger Revelle, but a few were written about Revelle by journalists and his colleagues. The series includes, for instance, a 1973 article about Revelle written by his Harvard associate, Harold Thomas. The series includes a few pieces by others apparently collected by Revelle. For instance, a number of lectures presented at the 1952 UCLA *Modern Physics for the Engineer* program are filed here.

Although the series are generally well defined, some subjects overlap into more than one series. For example, Revelle's staff generally filed material on conferences under that heading in the subject files. However, material on conferences sponsored by specific organizations is often filed under the name of the parent group in the organizations series. Thus the Pacem in Maribus conferences are filed by name under conferences in the subject files, while the Pugwash conferences are filed under the American Academy of Arts and Sciences in the organization series.

While most of the material in the collection concerning the Indian subcontinent is filed under that subheading in the subject series, a number of significant folders documenting Revelle's work on the subcontinent can be found elsewhere. Material documenting Revelle's work on the White House-Interior panel on Waterlogging and Salinity in West Pakistan is filed under President's Science Advisory Committee in the organizations series. The organization series includes folders on the Ford Foundation New Delhi conference, the Indian Agricultural Research Institute, the Indo-U.S. Joint Subcommittee on Science and Technology, and the Indo-U.S. Subcommittee

on Education and Culture. Revelle wrote frequently about his experience in India, Pakistan, Nepal and Bangladesh. His articles, speeches, and other writings on these nations can be found in the published and unpublished writings series.

Similarly, the bulk of the material documenting Revelle's work at Harvard appears in the Harvard series. Speeches concerning his population and other work at Harvard appear in the published and unpublished writings series. However, the organizations series includes folders on the Harvard Center for Population Studies Ford Foundation grant under *Ford Grant*, and folders entitled *Harvard Club of Boston*, and *Harvard Square Task Force*.

Most of the material on the United Nations appears under that heading in the organizations series, but material on the National Academy of Sciences committee on Science in UNESCO is filed under the National Academy of Sciences in the organizations series.

Revelle's staff initially filed material into the organizations series hierarchically. Headings in the series are largely indirect. For instance, material on the Bureau on Reclamation is filed under United States, Department of the Interior, Bureau of Reclamation. However, the hierarchical arrangement appears to have failed after a time, and many of the folders dated in the 1960's and 1970's are filed directly. Thus, there is a heading under Congress rather than U.S. Congress which includes material documenting Revelle's work for the House Committee on Science and Astronautics and other congressional groups.

The Revelle Papers include fulsome documentation of Revelle's scientific work, his contributions to population studies and analyses of rich and poor nations, his efforts to foster and support international scientific cooperation and his work as a consultant and advisor for government agencies including the Department of State, the Department of the Interior, and the President's Science Advisory Committee. Although the collection includes only a few of the lectures Revelle delivered at Scripps, the Harvard series includes excellent documentation of his work as a teacher. The Revelle papers do, however, have a few weaknesses.

The collection consists largely of material dated 1948-1979, after Revelle's return from the navy to the Scripps Institution. Although the collection includes some of Revelle's student papers and notes, the collection affords few opportunities to examine the young Revelle. The collection includes approximately a foot of correspondence in the correspondence series documenting Revelle's life from 1928-1947, and much of this material is professional rather than personal in nature. There is one exception. The collection includes an exchange of letters by Roger and Ellen Revelle with their Scripps friends Richard and Alice Fleming in 1936 when the Revelles were in Norway. A portion of this correspondence was published in Peter Sargent's *The Sea Acorn* (San Diego: privately printed, 1979).

The Revelle Papers include little documentation of Revelle's participation in Operation Crossroads and the subsequent Pacific atomic tests of the 1950's. The collection includes subject folders entitled *Bikini* and *Bomb Tests* which give scant information on Revelle's work. The *Navy Service* folders in the biographical series add but little information on the tests.

The Revelle Papers include only 17 folders of material documenting Revelle's efforts to establish the University of California, San Diego and all of the material is dated 1960 and later. Thus the collection includes virtually no documentation of the period 1954-1959 when the question of founding the university was being debated and when Revelle and his colleagues were establishing the framework of the university. Most of the material under the heading *University of California, San Diego* in the organizations series is official in nature, but a few additional personal letters dated 1959-1960 about Revelle's efforts to foster the university can be found among the personal correspondence subheading of the correspondence series.

The Revelle Papers include thirteen folders on the Scripps Institution of Oceanography in the organizations series. Some of this material is substantive administrative correspondence, but the bulk of the documentation of Revelle's work as associate director and director of Scripps is to be found in the SIO Records of the Office of Director (Revelle), SIO Archives accession 81-23.

Related Collections

Many collections at the SIO Archives include material documenting Revelle's life and career. Substantial material on Revelle can be found in the SIO Subject Files (81-16), among the Records of the Office of the Director (Vaughan, 81-25; Sverdrup, 82-56; Revelle, 81-23), and among the personal papers of his colleagues and friends, Denis Fox (83-65), Carl Hubbs (81-18), Walter Munk (82-58), and Francis Shepard (84-27). The archives also holds audio recordings of Revelle's remarks before the first International Oceanographic Congress in 1959 (82-3), and a videocassette recording of the symposium in honor of Revelle's 75th birthday held at Scripps on March 9 and 10, 1984. (84-13)

Additional material documenting Revelle's life can be found among the Thomas Wayland Vaughan Papers at the Smithsonian Institution Archives, the Carl Eckart papers at the Manuscript Division of the Library of Congress, and records documenting the Hydrographic Office, Office of Naval Research and Bureau of Ships among the records of the U.S. Navy at the National Archives. Revelle's records as President of the American Association for the Advancement of Science are housed at the AAAS Archives in Washington. Some of his records as Director of the Harvard Center for Population Studies can be found among the records of the School of Public Health at Harvard's Countway Library in Boston.

Provenance: When Roger Revelle left Scripps and moved to Harvard in 1964, he took his personal papers with him. His files as Scripps director were packed at the time by his office staff and stored in the penthouse of Ritter Hall. Archivist Betty Shor rediscovered the Ritter Hall material and transferred it to the Archives in 1979. This material consisted largely of Revelle's files as associate director and director of the Scripps Institution. The Ritter Hall files were accessioned into the Scripps archives as Records of the Office of the Director (Revelle), accession number 81-23. When Revelle returned to La Jolla in 1976, he brought sixty-three cartons of personal papers, books and other material with him. These boxes were placed in storage in a warehouse in Solana Beach. The Revelles transferred this material to the Scripps archives on August 4, 1982 followed by a deed of gift. The material was accessioned into the Scripps archives as the Roger Randall Dougan Revelle Papers, accession 83-47, herein. Four scrapbooks were included.

35mm Slides

ITEM	TITLE
	[Chart of Wells, Aquifers]
	General linear regression model
	Details of seasonal fluctuations
	Multiwell model: groundwater trace, run III
	Multiwell model: drawdown vs. pumping rate
	Multiwell model groundwater trace, run IV
	Rate of ground water accretion, single well model

ITEM	TITLE
	Salt concentration of applied irrigation water
	Multiwell model: groundwater trace, run VII
	Salt concentration of applied irrigation water
	Multiwell model: groundwater trace, run XI
	Multiwell model: groundwater trace, run IX
	Effect on the ground water level of irrigation with various cropping patterns. All runs with total annual application of lining 50% effective
	Water budget for first level of development: former Punjab and Bahawalpur regions, Surface distribution, recovery of recharge, and rates of mining in saline and non saline areas
	Relationship between the benefit and cost parameters and the optimum choice of values for decision variables
	Budget for the first level of development
	Modeled ten-mile strip of aquifer: locations of canal and tubwells in the prototype and in the electric analogue computer
	Graphs showing water drawdowns in the ten-mile strip aquifer after pumping twenty years; total discharge from 10 wells
	Graphs showing water drawdowns in the ten-mile strip aquifer after pumping twenty years; total discharge from 10 wells
	Modeled ten mile strip of aquifer: water table profiles for six analogue computer studies with different pumping and recharge rates
	Schematic diagram of salt flow model
	Numerical solution of 5 by 16 flow net: ten stream tubes
	Salt concentration of applied irrigation water
	Salt concentration of applied irrigation water
	Schematic diagram of basic hydrologic model for digital computer simulation

ITEM	TITLE
	Multiwell model: well location, 14 runs
	Multiwell model: drawdown vs pumping rate
	[Brick building]
	[Building with 3 men in front]
